### PURPOSE

A blood glucose test is used to find out if your blood sugar levels are in a healthy range. It is often used to help diagnose and monitor diabetes.

BGM provides a glucose value for the specific point in time, whereas CGM gives you a more complete picture of where your glucose is going.

### GOOD TO KNOW

Two units of measurement are available: mg/dL and mmol/L.

Sometimes, some accessories are sold together : e.g lancing device are with lancets or with blood glucose meter.

You'll always need a Glucose Meter, with BGM and CGM.
